BD|SENSORS products now also with CCS approval

Robust pressure and level measurement technology for the consistent use in Chinese shipbuilding and offshore plants

All pressure and level transmitters of BD|SENSORS' shipbuilding series have now also a CCS approval (China Classification Society).

They are thus suitable not only for the use on ships, but also on onshore and offshore plants requiring this Chinese certification.

An excellent accuracy and long-term stability as well as a high overload and salt water resistance are only some criteria in the field of shipbuilding and offshore applications, which our specially designed pressure and level transmitters comply with. Moreover, they present reliable measurements despite of vibration and changing temperatures and offer maximum security in hazardous areas for tank content measurements as well as loading and unloading processes of chemicals and liquid gas.
