

# LMK 858

# Detachable Plastic Probe

Ceramic Sensor

accuracy according to IEC 61298-2: standard: 0.35 % FSO option: 0.25 % FSO

## Nominal pressure

from 0 ... 40 cmH<sub>2</sub>O up to 0 ... 100 mH<sub>2</sub>O

## **Output signals**

2-wire: 4 ... 20 mA others on request

#### **Special characteristics**

- diameter 45 mm
- diaphragm ceramics Al<sub>2</sub>O<sub>3</sub> 99.9 %
- cable assembly and sensor head detachable
- chemical resistance
- housing PP-HT
- integrated lightning protection and increased overvoltage protection 8 kA gas discharge tube (8/20 µsec); 4 kV surge I-I/I-e according to EN61000-4-5

## **Optional versions**

- different kinds of cables and elastomers
- cable protection (on request)

The separable plastic immersion probe LMK 858 was designed for level measurement in aggressive media (acids, alkalis), desalination plants and for use in more viscous media such as sludge. Since the area of application is often outside a building, great emphasis was placed on high surge / lightning protection.

The immersion probe is based on an extremely robust and precise pressure sensor, the membrane of which consists of a high-purity ceramic (99.9% purity), with which even the smallest fill levels can be reliably detected.

Another special feature of the LMK 858 is the separability of the probe head and cable part. This advantage reduces maintenance or service tasks and also simplifies storage.

#### Preferred areas of use are

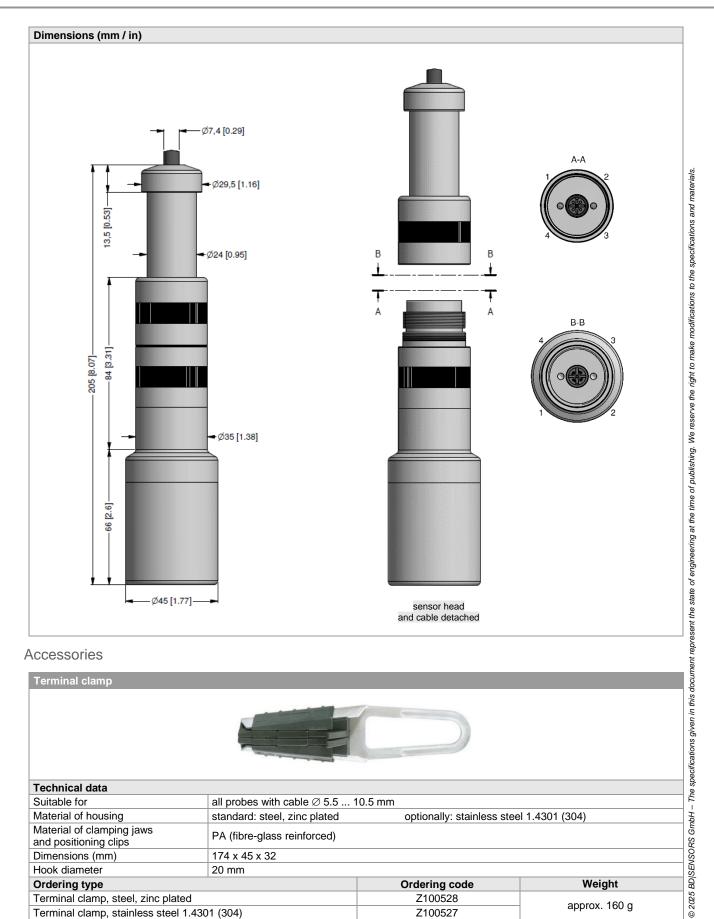

waste water treatment, dumpsite, water recycling

<u>Aggressive media</u> level measurement in most of acids and lyes
