

# **LMP 307T**

# Level and Temperature Transmitter

Stainless Steel Sensor

accuracy according to IEC 61298-2: standard: 0.35 % FSO option: 0.25 % FSO

#### Nominal pressure / nominal temperature

from 0 ... 1 mH $_2$ O up to 0 ... 250 mH $_2$ O from 0 ... 30 °C up to 0 ... 70 °C others on request

## **Output signals**

2-wire: 4 ... 20 mA (pressure)

2-wire: 4 ... 20 mA (temperature)

### Special characteristics

- diameter 26.5 mm
- separate output signals
   for pressure and temperature ranges
- easy handling
- low maintenance and wiring costs

#### **Optional versions**

- drinking water certificate according to DVGW and KTW
- different kinds of cables and elastomers
- customer specific versions

BD|SENSORS has developed the stainless steel submersible probe LMP 307T for continuous level and temperature measurement in water and in clean or lightly polluted fluids. The advantage: simultaneous recording of level and temperature with separate independent signal amplification. The maintenance and wiring costs are considerably reduced.

In addition to classical signal processing of the level, an additional signal circuit independent of the level which converts the temperature signal into a 4 ... 20 mA analogue signal in 2-wire technology is provided

Typical application areas are, for example, drinking water purification, monitoring of rain spillway basins or river courses and level measurement in containers or tank batteries.

### Preferred areas of use are

Water / filtrated sewage

drinking water system rain spillway basins water recycling
