

Declaration of Conformity

regarding materials and objects intended to come in contact with foodstuffs

BD Sensors GmbH hereby declares, under its sole responsibility, that the products

**DMK 331P, DMP 321P, DMP 331 P, DMP 331Pi, DS 200P, DS 201P, DS 400P,
x|act i, XMP i**

conform to the statutory requirements of Regulation (EC) No. 1935/2004 of the European Parliament and Council of 27 October 2004 and Regulation (EC) No. 2023/2006 of 1 August 2008.

These regulations set down uniform specifications for objects that come in contact or can come in contact with foodstuffs, either directly or indirectly, as well as good manufacturing practice for these objects. In the case of pressure transmitters this only applies to parts which persistently come in contact or can come in contact with foodstuffs when used as intended.

For the pressure transmitters from BD|SENSORS intended for use with foodstuffs, the requirements of the regulations relate to the media wetted parts such as separating diaphragms and pressure ports.

All media wetted parts concerned are made from food-grade stainless steel 1.4404 or 1.4435. Housings, plug-and-socket connectors and cables are made from materials which may briefly come in contact with foodstuffs but are not designed for persistent contact with foodstuffs.

Traceability

All BD|SENSORS products are marked with a serial number. The production date and delivery batch can be traced from this serial number.

This document has been generated electronically and is valid without a signature.
